Descriptors-*College Faculty, Directories, *Inservice Teacher Education, *Junior Colleges, *Teacher Education

This second annual directory of in-service training programs was compiled by the Faculty Development Project of the American Association of Junior Colleges in cooperation with the Carnegie Corporation. It covers training workshops and short courses specially designed for professional improvement and refreshment of faculty and instructors at AAJC member institutions. The material is arranged by subject matter (academic, vocational-technical, education/curriculum/learning, management and administration, student personnel services, National Science Foundation courses, etc.) and by geographical region (Northeast, South Atlantic, South, North Central, West). The information was obtained from colleges, universities, professional groups, government agencies, education associations, consultants, and other training organizations and institutions. Besides subject matter, each entry includes site, date, credit, and cost. The guide does not list Education Professions Development Act programs. In all cases, the directory specifies the office or person to whom inquiries should be sent. To improve future issues of the guide, readers are invited to submit comments, data on future programs, or any other pertinent information. (HH)

1969 GUIDE TO IN-SERVICE TRAINING FOR

TWO YEAR COLLEGE FACULTY AND STAFF MEMBERS

The attached directory is the second in a series of annual in-service training guides for junior and community college instructors and staff members. It was compiled by the Faculty Development Project of the American Association of Junior Colleges, with the cooperation of the Carnegie Corporation of New York. Data is included on training workshops and short courses which are conducted specifically or primarily for the purpose of meeting the requirements of professional improvement and refreshment for teachers and staff members at AAJC member institutions. Conferences and meetings are not included, nor is information on programs outside the area of primary interest and relevance to the junior and community college professional.

The plan for the Guide is a simple one. Data has been arranged and presented in such a way as to be of greatest use both to the teacher and the specialist as well as the college dean, department head or chief administrative officer seeking information on available staff training opportunities. Beyond the following simple categories, no attempt has been made either to evaluate the courses listed nor to describe or characterize them otherwise.

1. Subject Matter

   Academic
   Vocational and Technical
   Education, Curriculum and Learning
   Administration and Management
   Student Personnel Services
   National Science Foundation Courses
   Other

2. Geographical Regions

   The regions used in this study are based on information from the U.S. Census Bureau. A list of the states included in each region is attached.

Information was obtained from a variety of sources. Among those which have provided information for this Guide are colleges, universities, professional groups, government agencies, education associations, consulting groups and other training organizations and institutions.

The greatest care possible has been taken in editing this Guide. However, no claim can be made for its completeness, nor for its entire accuracy. Furthermore, no responsibility can be accepted for the information provided to AAJC by training organizations concerning subject matter, sites, dates, credit or costs. Where such data is omitted or incomplete, it did not appear in the original training announcement as forwarded to the Association. In all cases, a contact person (or office) is specified to whom all further inquiries and requests should be directed.

Primarily, the Guide is meant to serve those who seek a basic knowledge of in-service instruction, usually short courses, which is most frequently available during the course of the coming summer months.

The 1968 edition was the first in a series. It was published late last year, and was therefore only of limited use to those who sought information about training

opportunities. However, this 1969 Guide (and for subsequent years, if response justifies it) is published in February, thus allowing it to serve better its basic purpose as a planning tool for summer training by faculty and administrators. If sufficient information on additional courses becomes available later, a second Guide may be compiled in late Spring.

The reader can help to make the Guide more useful and more responsive to his particular staff training needs. In particular, answers to the following questions can assist in its improvement:

1. Tell us whether you find the 1969 AAJC In-Service Training Guide useful, in what ways (if any) it can be improved, and whether you would be interested in receiving such a Guide annually.

2. Fill in and return the attached 1970 AAJC Training Guide Registration Form as soon as you have information which you wish included in next year's Guide. Such information should describe new or recurrent in-service training programs or workshops, designed specifically to improve or expand the skills and knowledge of two-year college faculty and related professional staff.

3. Inform others planning for training courses about the Guide, and encourage them to advise the Association of all up-coming workshops, courses and other in-service training opportunities.

Please direct your questions, comments, and course registration requests for this Guide to:

NOTE: AAJC does not necessarily endorse programs included in this Guide. Inclusion implies neither approval nor disapproval of the course, its sponsor or its objectives. The intent is to list only legitimate "short courses". The U.S. Office of Education has available lists of training grants made under the Education Professions Development Act (EPDA). Therefore, this Guide does not list EPDA programs.

For inclusion in the Guide, courses should be freely available to all qualified applicants. Final decision on the listing of courses must remain with the AAJC Faculty Development Project. Information on regular academic year programs for matriculated students can be obtained directly from many of the schools listed.

NATIONAL SCIENCE FOUNDATION COURSES

The following programs are administered by the National Science Foundation. They are either conducted specifically for the two-year college teacher or are open to him. This training was "created to strengthen the subject matter competence of college (and junior college) teachers of science, mathematics and engineering.... The courses are meant to respond to the generally recognized need of the ... teacher of science for periodic or continual replenishment of his knowledge. Generally, it is not intended that participation in these projects can take the place of regular graduate work." For that reason, reference to academic credits to be earned by taking such courses has been eliminated.

For the majority of projects, the National Science Foundation grant covers the cost of instruction, stipends, and allowances ("...basic stipends are provided to defray living costs for teachers during the period of participation."). Therefore, the usual "COST" category has also been eliminated. Often space is limited and competition is especially keen, so early requests for acceptance is advisable. The NSF publishes an annual guide of all forthcoming short courses and programs. This is available, free of charge, from: The National Science Foundation, Division of Undergraduate Education in Science, 1800 G Street, N.W., Washington, D.C. 20550.
